

Technical Project Report (Project 1)

1. Team Members Information

Name	Student ID	Role & Contribution
Bashar Saleh Hassan Saleh	2334889	Booking Manager Development, Technical Report Writing & Formatting.
Osama Mousa Ahmed Al-Muhaisen	2241599	Booking Manager Test Development, Software Review & Testing.

2. Project Overview

This project aims to develop a Booking Management application using modern web technologies, focusing on code organization and collaborative teamwork. We utilized GitHub as a Version Control System to ensure efficient performance and seamless integration of all programming components.

3. Tech Stack

- **React.js:** Used for building interactive user interfaces.
- **JavaScript (ES6+):** For programming the application logic.
- **Git & GitHub:** For project management and version control.
- **Node.js:** For the runtime environment and dependency management.

4. Contribution Matrix

Bashar Saleh Hassan:

- Initial project setup and repository structure.
- Development of the **Booking Manager** core module.
- Preparation of technical documentation and final report.

Osama Mousa Ahmed:

- Development of the **Booking Manager Test** suite.
- Unit Testing to ensure the project is bug-free and meets quality standards.
- Code integration and final repository push.

5. Development Workflow

1. **Analysis:** Studying project requirements and defining core tasks for the booking system.
2. **Development:** Each member working on their assigned part (Manager vs Test) using branches.
3. **Integration:** Merging code and resolving any technical conflicts.
4. **Documentation:** Writing this report to summarize the workflow and results.

6. Conclusion

The project was successfully completed, demonstrating high coordination within the team using Git. This ensured the delivery of a functional Booking Manager and its corresponding test suite, resulting in clean and organized code.
